

PRESS RELEASE Kinetic– Kinetic Traxle
FOR IMMEDIATE RELEASE
(Thanks in advance for two hardcopies, pdf or website-hyperlink)

KINETIC TRAXLE thru-axle – A new trainer-ready axle for holding mountain bikes in nearly any type of trainer.

Minneapolis, MN,– The Kinetic Traxle is a precision-machined replacement axle for mountain bikes that easily adapts any 12 mm thru-axle system to firmly lock into trainer cone cups. Specifically engineered to work on Kinetic trainers, the system is still adaptable enough to work with most other trainer brands making it a perfect solution for bike shop fitting stations and home-use alike.

“Kinetic has always worked hard to ensure that our trainers accommodate all types of bikes, and as bikes continue to evolve we will continue to find solutions for our customers. We take pride in sweating the details”, says Jason Overman, Kinetic’s North American Sales Manager.

The Kinetic Traxle comes in 3 thread pitches, coarse, medium and fine, to fit most bike brands. Unlike stock thru-axles, the Kinetic Traxle has tapered heads that stand out just far enough from the bike frame to fit into the cone cups on a Kinetic trainer.

The Traxle family is available at a retail price of 39,00€ per version.

Kinetic Traxle Fine
Part No: T-2100

For fine-threaded 12mm thru-axle systems including: Syntace X-12, DT SWISS (Tapered and Flat) and Specialized

Kinetic Traxle Medium
Part No: T-2102

For medium-threaded 12mm thru-axle systems including: SHIMANO SM-AX75 and SM-AX65 142mm x 12mm

Kinetic Traxle Coarse
Part No: T-2101

For coarse-threaded 12mm thru-axle systems including: RockShox Maxle, Trek APB Maxle and others
