**BionX 2016 and beyond – integration and multi-device controls**

---

*Feb. 10, 2015 - AURORA, ON, Canada – Canadian e-bike electric propulsion system manufacturer emphasizes improved design esthetics and offers multiple control alternatives*

**Semi-integrated battery**

*BionX, known for customized OEM solutions, will now offer a semi-integrated down or seat tube battery with an open mold tube design. It enables the bicycle manufacturers to further differentiate their product and brand design.*

*The integration of the battery into a frame concept allows for a seamless design language that is already very popular with many bicycle types. A quick and easy lateral insertion with a “slam lock” already installed on the frame, offers more space for full suspension frames and therefore even more options for the OEM customer to customize their Pedelecs powered by BionX.*

**Semi-integrated battery**

**New remote controller and display**

For the 2016 product line-up BionX will be offering a new intelligent, multifunctional remote controller that is optionally serving as stand-alone remote without the display. The remote enables the rider to control all basic functions, such as assistance and recuperation level, switch the system and light on/off as well as navigate through the menu and select the settings.

The new display features a quarter-turn mounting mechanism with rubberized grip areas on sides, multiple mounting positions and a multi-language menu.

There are three ways to use the new devices:

Option 1 is to keep it simple and just use the remote controller, which has several LEDs to show the current ride mode.

Option 2 is the remote controller in combination with the BionX display.

Option 3 is the remote controller, your personal smart phone and the BionX smartphone app (iPhone/Android).

**BionX®****New Remote Controller**

- Intelligent, multifunktional Remote Controller
- Works also as a stand-alone solution w/o a display or in combination with a smart phone

**About BionX**

*Headquartered in Aurora, Ontario, Canada, BionX International Cooperation develops and produces electric propulsion systems for intelligent, sustainable mobility. BionX stands for technological know-how, forward-looking technologies as well as reliable products and service. BionX propulsion systems are the perfect solution for the global increasing demand for clean and efficient mobility. Among the international OEM partners for customized solutions powered by BionX™, are renowned manufacturers from the bicycle as well as the automotive industries, such as Trek, Diamant/Villiger, BMW, SMART, WHEELER and KTM.*
