PRESS RELEASE: InterLock 2015 – ComboLock

For immediate publication

(Thank you in advance for sending two sample copies or a link)

The ComboLock: new bicycle lock opens OEM and entry level aftermarket

Interlock (www.the-interlock.com), makers of the first seatpost integrated cable lock launches an entry level daytime combination lock for a wide range of bike styles

Vancouver, Canada, July 21, 2015 - The InterLock™ is an innovative cycle lock system: a cable lock is discreetly concealed within the bicycle's seat post.

The concept is as simple as convenient. And now many more bike styles, especially city, trekking or folding bikes, as well as youth and kid bikes have an easy to use, yet secure solution with a combination lock—great for any bike that needs frequent locking.

The resettable combination lock comes set as “000”, then the user can personalize his own 3 digit combination. An easy push button then releases the lock when the combination is entered. Great for kids - no keys to be lost!

The security level of this lock is basic, so it's recommended for daytime use. For

longer stays and overnights its best to use a U-Lock for frame and front wheel. But as a secondary lock it secures then rear wheel, the seat and seatpost! - Not an uncommon theft in urban areas.

Compared to other locking systems the patented InterLock has many advantages: the lock is always on the bike, rattle-free and with no need for any additional mounting hardware. It's quick to use: thanks to the fast handling when you're making many stops in a day's riding.

You can pull the InterLock out to its full length in an instant, and at 90 cm long it's long enough to pass through the frame, back wheel and around a bike stand, post or other fixed object.

The lock consists of two connected plastic-coated stainless steel cables which offer 90cm of total length. The lock disappears completely inside the seatpost and into the frame of the bicycle. It is available in four different seat post diameters, in both black and silver.

Recommended retail price is US \$29.99 or € 29.95.
