

BionX 2016 and beyond – integration and multi-device controls

August, 2015 - AURORA, ON, Canada – Canadian e-bike electric propulsion system manufacturer BionX will present the new semi-integrated downtube battery as well as the DS3 Display and RC3 Controller at Eurobike 2015.

Semi-integrated battery

BionX, known for customized OEM solutions, will now offer a semi-integrated downtube battery with an open mold tube design. It enables bicycle manufacturers to further differentiate their product and brand design.

The integration of the battery into a frame concept allows for a seamless design language that is already very popular with many bicycle types. A quick and easy lateral insertion with a “slam lock” with improved connectors and docking station already installed on the frame, offers more space for full suspension frames and therefore even more options for the OEM customer to customize their Pedelecs powered by BionX.

New RC3 Remote Controller and DS3 Display

For the 2016 product line-up, BionX will be offering a new intelligent, multifunctional remote controller called RC3 that can operate as a stand-alone remote without a display. The remote enables the rider to control all basic functions, such as assistance

and re-gen-level, switch the system and light on/off as well as navigate through the menu and select the settings allowing for better control and stability while riding.

The new BionX DS3 Display features a transfective color display, a quarter-turn mounting mechanism with rubber hand grips on the sides for secure handling as well as multiple mounting positions and a multi-language menu.

there are two ways to use the new devices:

Option 1: Keep it simple and just use the RC3 Controller, which has several LEDs to show the current ride mode.

Option 2: Operate the DS3 Display with the RC3 Controller

BionX valued OEM partner WHEELER (Eurobike booth 200, hall B3) will launch their complete range of 2016 Pedelecs powered by BionX which will be equipped with the new semi-integrated battery as well as the RC3 controller and DS3 display. Trek has presented their MY2016 pedelec line-up incl. BionX RC3 and DS3 at Trek World Benelux, August 16.

About BionX

Headquartered in Aurora, Ontario, Canada, BionX International Cooperation develops and produces electric propulsion systems for intelligent, sustainable mobility. BionX stands for advanced technology, integrated designs and reliable products and service. BionX propulsion systems are the perfect solution for the global increasing demand for clean and efficient mobility. Among the international OEM partners for customized solutions powered by BionX™, are renowned manufacturers from the bicycle as well as the automotive industries, such as Trek, BMW, SMART, and WHEELER.
